## MEF EMC-FILTER 3-PHASE 2-STAGE

I:36A U:3x500 VAC book-style

Current: 36 A
2-stage
The MEF 3/1-3/2 3-phase and 1-/2-stage mains suppression filters are used in the 0.1 ... 30 MHz range to suppress conducted interference on mains and supply lines. They are suitable for TN-C networks. The best filter effect is achieved with short connecting lines (recommendation: PE connection < 10 cm ) with the largest possible cross sections. Line suppression filters act bidirectionally (in both directions). They reduce symmetrical and asymmetrical interference, which often occurs with frequency converters and switched-mode power supplies.
